

**ABSTRACT OF THE DISCLOSURE**

A propane tank covering device includes a first end wall, a second  
5 end wall and a peripheral wall extending between and being attached to the  
first and second end walls. The first end wall, the second end wall and the  
peripheral wall each comprise a flexible material. The peripheral wall has  
a bottom opening therein. The bottom opening is elongated and generally  
extends from the first end wall to the second end wall. The peripheral  
10 wall has a top opening therein. The top opening is positioned opposite of  
the bottom opening. The top opening is generally centrally located  
between the first and second end walls. The present invention is  
positioned over an above ground propane storage tank to enhance the  
appearance thereof.
